Enhanced Assisted Living Residence Guidelines & Services

Some of the services provided in enhanced living include but are not limited to, assistance with mobility, incontinency care and assistance with feeding, dressing and bathing. We provide cues for eating, directional assistance and participation in stimulating activities. The Garden Level is equipped overall with a secure care system to alert staff when exits are being utilized. A secure care system bracelet option is available for residents whose physicians and families agree there is a need for closer monitoring. Other services offered are skilled nursing observation and documentation. The staffing levels in enhanced care are higher which allows more time for staff interaction with the residents. Moreover, staff manages medication and may administer medications in the resident's rooms. Most therapeutic diets are offered, including three meals a day and a snack. A nutritional consultant is on staff to monitor a resident's diet.

Resident care staff and case managers will work closely with residents and their families who are interested in adding services such as Hospice or Visiting Nurses. However, please speak with us regarding other services that Longview can offer in the enhanced level of care.

Residents choose their own health care providers. A resident may obtain additional services from a licensed health care agency while at Longview.

Recreational/cultural programs are scheduled daily. Residents have the use of the library, greenhouse, craft room, auditorium, and chapel, as well as the pool and exercise room (under supervision). Our programming is enriched by the partnership we enjoy with Ithaca College.

A social worker is available to provide admission and discharge information, case management, counseling and assistance with problem solving.

Please contact Resident Services Staff with any questions regarding the Assisted Living Residence.
